Dr David Gilmartin, Dental Surgeon
Dr I-Chun (Mago) Peng, Dental Surgeon
Dr Jonathan Dixon, Dental Surgeon
Dr Etienne Deysel, Sedationist

Dr Gulelala Azhar, Dental Surgeon
Dr Konstantinos Tzamalas, Specialist Orthodontist
Dr Alvaro De Castro Torres, Dental Surgeon
Mrs. Nur Gilmartin, Dental Hygienist

Dr Jaime De Castro Torres, Dental Surgeon
Dr Casey Prawairadiraja, Dental Surgeon
Dr Monica Cueva Moya, Dental Surgeon
Miss Sam Singleton, Practice Manager

Laser Gum Treatment

Our Laser

We use the EPIC Laser is the only diode laser with three unique therapy modes:

Soft Tissue Surgery
Whitening
Pain Therapy.

It is the ideal tool for treating Advanced Gum Disease.

The Benefits for Patients

It eliminates the disease
Providing faster healing times
Reducing the risks of infection,
Completely painless
Creating less bleeding.
Creating less postoperative pain.

The laser generates a beam of concentrated light bringing energy into your mouth to help remove areas of infection as it destroys many bacteria and viruses found in the mouth.

The Ultimate in Patient Comfort

One of the most promising aspects of laser dentistry is the opportunity to do more with less anesthetic, and less damage to the tissue. This means that there is almost no post operative pain.

Our EPIC laser delivers on that promise with ComfortPulse, a proprietary innovation that delivers precisely controlled micropulses of diode energy to the tissue, followed by "down" time to allow tissue to relax and respond positively to laser treatment.

Our EPIC laser also introduces a new ComfortPulse setting that delivers pulses to the tissue as short as one ten-millionth of a second, resulting in improved patient comfort, less damage to surrounding tissues, and better healing. With Our EPIC laser, patient comfort is a reality.

The two comments we hear the most are

"I did not feel anything except a warm sensation" and **"The pain went almost as soon as you started"**

Treatment of Gum/Periodontal Disease

We use our laser to remove debris and bacteria between your teeth and gums that can cause bleeding gums, gum recession and even loss of teeth. The laser is highly effective at killing bacteria and may even stimulate gum tissue growth.

Take advantage of our Laser's capabilities including performing "pocket therapy" using single-use disposable Perio tips.

The laser is not hot and there is virtually no awareness of what is happening apart from a warm sensation.

Our EPIC Laser is a painless and effective alternative to the traditional method of surgically treating periodontal disease.

The Laser can be used for Gum Treatments for NATURAL TEETH and IMPLANTS.

When treatment with Our EPIC Laser is combined with Good Effective maintenance then the results are excellent.

We are always looking for more effective and easier and less traumatic ways to treat Gum Disease.

In most cases we will still have to clean the teeth prior to the laser treatment and this is normally done using Ultra Sonics

Our EPIC Laser is a painless and effective alternative to using DENTOMYCYN, which though very effective is an antibiotic.

Desensitising Sensitive Teeth

We offer a range of treatments for sensitive teeth.

If you have sensitive teeth, then a 2 minute procedure per tooth with a laser provides an effective solution with no local anaesthesia.

Although a permanent treatment for sensitive teeth, it should be noted that if further recession occurs in those areas, then they may become sensitive again.

Treating Cold Sores and Ulcers

If you suffer from cold sores or ulcers, then by using a laser's energy to minimise any sores developing and increasing the blood circulation.

This helps improve healing in the area allowing the ulcers and the sores to heal more quickly than they would do otherwise.

Take advantage of our Lasers capabilities including relief of lesions (aphthous ulcers, herpetic lesions).

Tissue Healing

Laser energy can be directed at areas where surgery has been carried out, such as the placement of a dental implant or removal of a wisdom tooth.

The laser improves blood flow and accelerates healing, reducing post operative discomfort.

Most treatment carried out inside your mouth can be carried out using a laser as it has the benefit of minimising bleeding and pain during and after the procedure. Traditional scalpel and sutures cause more tissue injury, pain, swelling and bleeding.
