Dr Iyad Abou-Rabii, PLT Dental Implants & Oral Surgery
Dr Ezgi Cilingir, PLT Dental Implants & Periodontics
Dr Jonathan Harper, PLT Endodontics
Dr Jaime De Castro Torres, SI Dental Implants

Laser Treatment For Sore Gums

Our Laser

We use the EPIC Laser is the only diode laser with three unique therapy modes:

Soft Tissue Surgery
Whitening
Pain Therapy.

It is the ideal tool for treating Advanced Gum Disease.

The Benefits for Patients

It eliminates the disease
Providing faster healing times
Reducing the risks of infection,
Completely painless
Creating less bleeding.
Creating less postoperative pain.

The laser generates a beam of concentrated light bringing energy into your mouth to help remove areas of infection as it destroys many bacteria and viruses found in the mouth.

The Ultimate in Patient Comfort

One of the most promising aspects of laser dentistry is the opportunity to do more with less anesthetic, and less damage to the tissue. This means that there is almost no post operative pain.

Our EPIC laser delivers on that promise with ComfortPulse, a proprietary innovation that delivers precisely controlled micropulses of diode energy to the tissue, followed by "down" time to allow tissue to relax and respond positively to laser treatment.

Our EPIC laser also introduces a new ComfortPulse setting that delivers pulses to the tissue as short as one ten-millionth of a second, resulting in improved patient comfort, less damage to surrounding tissues, and better healing. With Our EPIC laser, patient comfort is a reality.

The two comments we hear the most are

"I did not feel anything except a warm sensation" and **"The pain went almost as soon as you started"**

We are increasing seeing patient coming from other dental practices with sore gums associated mainly with previously extracted teeth or around teeth that have been referred to the hospital for extraction. They come to us because their own dentists have exhausted all the basic option. We offer MORE!!

Treatment of Sore Gums

We use our laser to reduce and even eliminate the pain associated with Infected or sore gums. The laser is highly effective at killing bacteria and reducing the pain in the gum, bone and muscles around the sore gum

The laser is not hot and there is virtually no awareness of what is happening apart from a warm sensation.

The pain relief is almost instantaneous and usually lasts until the antibiotics kick in.

Our EPIC Laser is a painless and effective addition to the traditional method of surgically treating wisdom teeth.

It is usually combined with other treatments that cause a reduction in infection and/or pain:

Antibiotics
Antibacterial Gels

Good Oral Hygiene
Perhaps Extraction

Antibacterial Mouthwashes
Removal of the sore/infected gum

When treatment with Our EPIC Laser is combined with Good Effective maintenance then the results are excellent.

Treatment of infected and/or Impacted Wisdom Teeth

We use our laser to reduce and even eliminate the pain associated with Infected or sore wisdom teeth. The laser is highly effective at killing bacteria and reducing the pain in the gum, bone and muscles around the wisdom tooth site

It is usually combined with other treatments that cause a reduction in infection of an impacted wisdom tooth:

We are always looking for more effective and easier and less traumatic ways to treat the pain associated with wisdom teeth..

Treating Cold Sores and Ulcers

If you suffer from cold sores or ulcers, then by using a laser's energy to minimise any sores developing and increasing the blood circulation and thus reducing the discomfort and pain normally associated with ulcers and cold sores.

This helps improve healing in the area allowing the ulcers and the sores to heal more quickly than they would do otherwise.

Take advantage of our Lasers capabilities including relief of lesions (aphthous ulcers, herpetic lesions).

Tissue Healing

Laser energy can be directed at areas where surgery has been carried out, such as the placement of a dental implant or removal of a wisdom tooth.

The laser improves blood flow and accelerates healing, reducing post operative discomfort.

The results are almost instantaneous and involve no injects and is therefore very suited to nervous patients and those who can't have an injection.

Most treatment carried out inside your mouth can be carried out using a laser as it has the benefit of minimising bleeding and pain during and after the procedure.

Traditional scalpel and sutures cause more tissue injury, pain, swelling and bleeding.
